

Market Grammar — Brand Guidelines

Dense. Precise. Locally fluent.

Internal Use Only · v1.0 · 2026

For the latest version, visit the digital brand book.

Brand Story

Enfactum exists because Southeast Asia's markets don't move like Western playbooks say they should. Most GTM tools were built for US enterprise markets — linear funnels, single-language outreach, predictable buyer cycles. Southeast Asia has none of that. 14 markets. 6 dominant languages. Compressed deal cycles.

POSITIONING STATEMENT

**"The Bloomberg Terminal of SEA GTM.
Dense. Precise. Locally fluent."**

THREE DESIGN PRINCIPLES

Density is Clarity

Information-rich layouts signal intelligence, not overwhelm. Whitespace is earned.

Precision is Trust

Every pixel, weight, and token is deliberate. Craft communicates competence.

Locality is Advantage

SEA's multi-script modernity and urban density are our aesthetic source code.

Logo Guidelines

The Enfactum wordmark uses a distinctive tri-color split: "en" in the current text color, "fact" always in Brand Blue (#0057FF), and "um" in the current text color. This split is mandatory in all contexts.

enfactum

LOGO VARIANTS

Primary (Dark)

White + Blue on dark backgrounds. Default for all external materials.

Light Variant

Blue "fact" on white backgrounds. "en" and "um" render in Midnight.

Symbol Mark

Just "fact" in Brand Blue. For favicons, app icons, small contexts.

RULES

- Never render the full name in a single color
- Never capitalize: it's 'enfactum', not 'Enfactum'
- Minimum size: 80px wide for digital, 20mm for print
- Clear space zone equals the cap height of the lowercase 'e'

Color System

Our data-noir aesthetic requires absolute colour precision. Dark mode is ALWAYS the hero presentation. Never hardcode hex values — use semantic CSS custom properties.

BLUES

	Brand Blue	#0057FF	--primary
	Electric Blue	#2979FF	--highlight
	Blue-600	#0042CC	Hover state
	Blue-700	#002E99	Active/pressed
	Blue-900	#000D33	Extreme dark

NEUTRALS

	Midnight	#0A0F1E	--background
	Neutral-800	#0D1020	Deep surfaces
	Neutral-700	#141829	--surface
	Neutral-600	#252A47	--elevated
	Neutral-400	#6B7290	--muted
	Neutral-200	#C8CDD9	Body text light
		#FFFFFF	--foreground (dark)

FORBIDDEN

- ✗ No gradients as backgrounds
- ✗ No orange/red/warm tones
- ✗ No purple/violet as background fill
- ✗ Blue is never a background fill — accent only

Typography System

IBM Plex Sans is the primary typeface for all text. IBM Plex Mono is reserved strictly for numeric data, metrics, code blocks, and design token references.

TYPE SCALE

TOKEN	SIZE / WEIGHT	LINE-H	USE CASE
Display-01	72px / Bold	1.1	Hero headlines
Display-02	56px / Bold	1.15	Section heroes
Heading-01	40px / Bold	1.2	Page titles
Heading-02	32px / Bold	1.25	Subsections
Heading-03	24px / SemiBold	1.3	Card titles
Body	16px / Regular	1.6	Body copy
Small	14px / Regular	1.5	Secondary text
Caption	12px / Regular	1.4	Labels, meta
Eyebrow	10px / SemiBold	1.2	Section labels, 0.12em tracking, uppercase

Visual Style

Imagery revolves around 3D abstract geometric forms and architectural structures. We strictly avoid literal people-in-action in favor of immersive environments that convey scale, precision, and market density.

PHOTOGRAPHY PRINCIPLES

1. Search for '3D geometric architecture dark' or 'brutalist abstract midnight blue'
2. Filter for dominant cool tones (blue, midnight, steel gray)
3. Reject anything with warm tones (red, orange, yellow)
4. No people, faces, or hands — including reflections
5. Image should evoke 'infrastructure' or 'system' — not 'lifestyle'

IMAGE CATEGORIES

Primary 3D Elements

Abstract 3D blocks and market infrastructure

Market Architecture

Expansive structural environments suggesting infinite scale

Structural Patterns

Repeating geometric patterns reinforcing stability

Data Flows

Light-trail abstractions representing signal movement

Territory Maps

Stylized geographic abstractions of SEA markets

Motion & Animation

Precise deceleration only. No spring physics, no bounce. The standard easing function is cubic-bezier(0.4, 0, 0.2, 1). Every motion communicates hierarchy, state, and data density.

EASING CURVES

Enter — Decelerate

`cubic-bezier(0.0, 0.0, 0.2, 1.0)`

Modals, cards appearing

Exit — Accelerate

`cubic-bezier(0.4, 0.0, 1.0, 1.0)`

Modals closing, dismissing

Standard

`cubic-bezier(0.4, 0.0, 0.2, 1.0)`

Hover, color, layout shifts

DURATION SCALE

Instant	0ms	Toggles, boolean flags
Fast	100ms	Microinteractions
Base	200ms	Standard interactions
Moderate	300ms	Theme toggle, page transitions
Slow	500ms	Complex reveals, stagger parent

Voice & Tone

Authoritative but never arrogant. Precise but never clinical. Locally fluent but globally legible. Data-dense but never inaccessible.

THREE REGISTERS

Intelligence

The default. Data-led, pattern-revealing, precise. Used for product copy, documentation, LinkedIn thought leadership.

Command

Short. Declarative. For CTAs, notifications, error messages, UI microcopy.

Warmth

Allowed sparingly. For customer success, onboarding, partner communications. Never in sales or marketing.

VOCABULARY RULES

✓ Say 'signal'	not 'lead' or 'prospect'
✓ Say 'territory'	not 'region' or 'market'
✓ Say 'pipeline architecture'	not 'sales funnel'
✓ Say 'market grammar'	not 'market dynamics'
✓ Say 'conversion infrastructure'	not 'sales enablement'

Ethical AI Use

Enfactum operates across 14 markets with distinct cultural contexts, representation needs, and data privacy norms. These are the non-negotiable rules for responsible AI use.

THREE PILLARS

Representation

Every image prompt must include market-specific representation instructions. Default AI outputs skew Western unless explicitly overridden.

Copyright

Never reference specific artists by name. Style is described through attributes (lighting, materials, composition), not attribution.

Data Privacy

Client names, deal values, unreleased product details, and PII must never appear in prompts sent to public AI tools.

NEVER PUT IN A PUBLIC AI TOOL

- ✗ Client company names (use [CLIENT])
- ✗ Deal values or contract amounts
- ✗ Unreleased product or feature names
- ✗ Employee personal data
- ✗ Internal financial metrics
- ✗ Login credentials or API keys

enfactum

Dense. Precise. Locally fluent.
